## Course Outline

This package includes these courses

- Excel, Finance, & Investing Summer Program Live Online (25 Hours)
- Python for Data Science & AI Live Online (45 Hours)

## Excel, Finance, & Investing Summer Program Live Online

Gain a competitive edge in business and finance with this in-person summer program designed for high school students.

Through hands-on training in Microsoft Excel and real-world case studies, students will learn to analyze financial data, evaluate companies, and understand the principles behind investing and corporate finance.

- Build beginner-to-advanced Excel skills, including formulas, Pivot Tables, and macros
- Analyze financial data and company earnings using Excel-based modeling techniques
- Learn core investment principles, including stock fundamentals, valuation, and risk
- Understand financial statements and how they work together in real-world scenarios
- Explore accounting concepts like EBITDA, depreciation, and cash flow analysis
- Perform corporate valuation and decide whether a company is a good investment

## Python for Data Science & AI Live Online

This course introduces high school students to the core principles of Python programming for data science and artificial intelligence. Through hands-on lessons and real-world projects, students will gain practical experience in data analysis, machine learning, and visualization techniques.

- Write Python scripts using key concepts like variables, functions, loops, and conditionals
- Use lists, dictionaries, and sets to organize and manipulate data efficiently
- Read and write text and CSV files, and clean and prepare data for analysis using Pandas
- Visualize data through custom charts with Matplotlib, including scatter plots and histograms
- Explore core machine learning techniques such as linear regression and K-nearest neighbors
- Complete a final project using real datasets to present insights with analysis and visuals
